

Authorization Capability for Prime Service Catalog End Users

April 2014

- By default, the Prime Service Catalog end users are given three roles
 - My Services Consumer
 - Request Fulfillment Roles
 - Request Self-Service Roles
- “My Services Consumer” includes the “Authorization” capability
- As a result, every end user has the **Authorization** capability and sees the “Open authorizations” view.

Disabling Authorization for End Users

- Some implementations may not want to show the “Open authorizations” tab to end users because they do not ask “end users” to authorize requests.
- You will need to identify the **OUs** whose users should not see the authorization tab.
- Steps to disable the authorization tab
 1. Go to Organization Designer, copy the “My Services Consumer” role to a custom role.
 2. Open the Members tab for this custom role, and add all of the **OUs** that you want to have this role.
 3. Go to “My Services Consumer” role, and
 4. open its Members tab.
 4. Remove the **OUs** that you edited in the previous step.
- Then your end users will see their “Service Catalog” module without the authorization tab.
