Monitor and Manage Cisco Small Business Pro Devices with N-central®—FREE for a Year!

Register Now!

N·able

If you're looking for a proven solution to better manage Cisco® small business devices and networks, N-able has it—and we're offering you the opportunity to **use it FREE for one year,** with no strings attached. This offer is available to all Cisco partners focused on Cisco Small Business products, including the Cisco Small Business Pro Series platforms.

N-able Technologies® is the global leader in network and systems management solutions and services for managed services providers (MSPs) focused on small and medium-sized businesses. Rated number 1 by CRN magazine, N-central software is used by thousands of service providers worldwide to monitor, manage, and remediate issues on their customers' desktops, servers, and network devices—including Cisco products—all done remotely and easily from a single management console.

As a result of N-able's work with Cisco, N-central **has deep integration with a range of Cisco products** and includes current and upcoming Cisco Small Business Pro Series platforms. Examples of platforms focused on small business customers are:

· Cisco ESW 500 Series Switches

· Cisco IAD 2432 Integrated Access Device (FXS port)

· Cisco 500 Series Secure Routers

· Cisco Unified Communications 500 Series for Small Business

Special Offer

Register for a free subscription to N-able's hosted N-central software at **no cost and with no obligation**. Use it to monitor and manage up to 10 devices remotely for a full year. Upgrade at any time to the N-central on-premise software or hosted subscription-based service.

N-central Core Functionality

- Manage Windows and non-Windows systems as well as network devices—including Cisco devices—with lightning-fast remote control.

- Monitor all of your customers' networks and devices on a single console.

- Distribute software, apply patches, execute scripts, and transfer files—remotely and easily

- Auto-discover complete network infrastructure and systems information in minutes

- Produce reports to speed troubleshooting and demonstrate network performance under your management

Using N-central's ultra-fast Secure Shell (SSH), Telnet, or web page remote control, you can access and manage any Cisco router or switch. Plus, you can auto-discover and monitor Cisco devices for the availability and performance of CPU, memory, active connection, and security log/Simple Network Management Protocol (SNMP) trap.

Advantages for MSPs

- Provide in-depth monitoring and management of your customers' voice over IP (VoIP) equipment

- Monitor all customers' Cisco devices from a single dashboard

- Deliver higher levels of service and greater value to customers

- Differentiate your business by offering a more robust, reliable service

- Improve ability to provide comprehensive asset management services

- Discover and fix issues before they lead to costly downtime

Advantages for Customers with Cisco devices

- Improve Cisco device performance and availability

- Reduce costs and increase device and network uptime

- Gain peace of mind from knowing that their Cisco devices are being monitored at all times
