

crr

The screenshot shows the Windows Services console. The 'Services (Local)' window is open, displaying a list of services. The 'COM+ System Application' service is selected and highlighted in blue. The left pane shows the service's description: 'Manages the configuration and tracking of Component Object Model (COM)-based components. If the service is stopped, most COM+-based components will not function properly. If this service is disabled, any services that explicitly depend on it will fail to start.'
