#
# Cisco Aironet APs use the type-length-value (TLV) format for DHCP
#
# option 43. DHCP servers must be programmed to return the option based
#
# on the AP's DHCP Vendor Class Identifier (VCI) string (DHCP Option 60). #
# The format of the TLV block is:
#
#   Type: 0xf1 (decimal 241)
#
#   Length: Number of controller IP addresses * 4
#
#   Value: List of WLC Management interface IP addresses converted to hex #
# The samples below show 1 controller address, 192.168.247.5
#
